- ☑ Balkh
- ☑ Hirat
- ☑ Kabul
- ☑ Kandahar
- ☑ Nangarhar

Source: WFP price export. Prices in AFN/kg. Selected markets only; results do not represent national inflation.

Source and scope
WFP Afghanistan price export, downloaded 11 November 2026. This analysis covers January 2023–December 2025 across five markets: Balkh, Hirat, Kabul, Kandahar, and Nangarhar.

Data selection
Only aggregated retail prices in AFN per kilogram were included for low-quality rice, low-quality wheat flour, and cooking oil. Forecast records were excluded.

Preparation and validation
Python prepared and validated 540 records: five markets × three commodities × 36 months. Checks confirmed unique market–commodity–month combinations, complete monthly coverage, and positive prices. MySQL calculated price changes; Excel independently checked selected results before Power BI visualization.

Calculations
Monthly change = (current price ÷ previous month's price) − 1.
Yearly change = (current price ÷ same month in the previous year) − 1.
Missing comparisons were retained: 15 monthly and 180 yearly comparisons have no earlier observation within the dataset.

Interpretation limits
Results describe selected markets and commodities, rather than national inflation. Prices alone do not measure affordability, food quality differences, or explain the causes of changes. Latest-price comparisons use December 2025.

1. Rice price changes differed across markets
Between January 2023 and December 2025, rice prices rose **25.41% in Kandahar** and **18.97% in Kabul**, while falling **26.43% in Hirat**.

2. Kabul had the highest latest rice price
In December 2025, rice cost **82.50 AFN/kg in Kabul**, compared with **45.00 AFN/kg in Nangarhar**, the lowest among the five selected markets.

3. Kandahar's final-month increase deserves attention
Kandahar rice prices rose **35.78% from November to December 2025**. Its December price was also **34.50% higher than December 2024**. This final-month jump strongly affects its start-to-end comparison.

4. Wheat flour prices declined in several markets
From January 2023 to December 2025, wheat flour prices fell **40.30% in Balkh**, **31.40% in Kabul**, and **26.86% in Kandahar**.

These are descriptive findings for selected markets. Large changes warrant further investigation; this analysis does not establish their causes.
